

AD eDiscovery[®] Appliance

Effectively Perform End-to-End E-Discovery

Many organizations struggle with the complexities of spec'ing, buying, deploying and managing piecemeal e-discovery solutions. Overcoming these challenges can be overwhelming for many organizations, which makes our purpose-built appliance packages a perfect fit. Empower IT, corporate legal departments and other stakeholders to work efficiently in cross-functional teams to ensure regulatory compliance, improve response efficiency and lower overall legal costs. Our end-to-end e-discovery solution allows organizations to seamlessly conduct enterprise-wide search, targeted collection, systemized preservation, legal hold, data processing and assessment, and complete legal review.

Available Options

AD eDiscovery[®] Appliance is available in several user and capacity options to suit any organization. AccessData covers all updates and patching to the software

Available configurations are as follows:

TIER 1 SMALL CORPORATION

Hardware, application software, 1 site server license, 5,000 endpoint collectors, 2 structured data connectors (Microsoft[®] Exchange & Microsoft SharePoint[®]), 5 web-based user accounts and 1TB of annual processing throughput provided.

TIER 2 MIDSIZE CORPORATION

Hardware, application software, 2 site server licenses, 15,000 endpoint collectors, 2 structured data connectors (Microsoft Exchange & Microsoft SharePoint), 10 web-based user accounts and 2TB of annual processing throughput provided.

TIER 3 LARGE CORPORATION

Hardware, application software, 3 site server licenses, 25,000 endpoint collectors, 2 structured data connectors (Microsoft Exchange & Microsoft SharePoint), 25 web-based user accounts and 5TB of annual processing throughput provided.

Support and Services

Each appliance offering includes access to our telephone and online support. Remote implementation and knowledge transfer support can be added at time of purchase. Support and service hours can be purchased on an hourly basis to be used for consultation, help with migration of data, SQL setup/maintenance, or upgrade support.

Ask about Our Training Options

Available training packages include in-person custom training, Live On-Line (LOT) classes and access to our online on-demand Learning Management System (LMS) library of AD eDiscovery training and written materials for all courses.

Appliance Highlights

- **End-to-end e-discovery.** Legal hold, collection, data processing, ECA and final review—all within a single solution.
- **Full or targeted collection, on or off the network.** Collect data using complex filtering techniques based on content, data, owner, custodian and data type with Boolean logic.
- **Collect evidence without manual investigation.** Forensically preserve ESI from all data sources, including email systems, more than 30 commercial data repositories, shared drives, laptops, desktops, servers and cloud sources, such as Google Drive[™] and Office 365[™].
- **Forensically image entire systems.** Support criminal, civil or internal investigations, even over tenuous network links.
- **Full-featured legal hold.** Automated documentation, notification, escalation and extensive reporting with a graphic hold and custodian status dashboard that can synchronize with management databases.
- **Advanced data visualization.** Interactive visualization of case data quickly identifies relationships and custodian communication patterns within email archives. Analyze structured and unstructured data using geo-location maps, document type, data stamps and other metadata attributes.
- **Integrated predictive coding.** Eliminates the need to put reviewer eyes on every document to find the most relevant set.

Savings from a single case involving 10 custodians and 100 GB of ESI can reach **\$80,000.**

What You Can Do with AD eDiscovery

► **Collect evidence without manual investigation.**

Forensically preserve electronically stored information (ESI) from all data sources, including email systems, more than 30 commercial data repositories, shared drives, laptops, desktops, servers and cloud sources such as Google Drive™ and Office 365™. Set up recurring and scheduled jobs to perform ongoing incremental collections—anytime, anywhere—during off peak hours, both behind and external to the corporate firewall.

► **Expedite analysis.** Search, visualize and organize collected data with no need to recursively move data to a different repository or third party vendor, for faster analysis and access by both internal and external stakeholders, through secure web and role based access.

► **Perform deep content analytics.** Leverage advanced interactive visualization of case data to quickly identify relationships and custodian communication patterns within email archives. Further analyze structured and unstructured data using geo-location maps, document type, date stamps and other metadata attributes.

► **Eliminate spoliation or tampering claims.** Preserve the original ESI content and metadata for litigation—regardless of data volume, target or collection frequency. Process over 700 data types (including PSTs/NSFs) with full forensic logging using MD5 hashes to eliminate chances of spoliation claims. Reuse collected data across numerous cases to better manage “serial custodians” and growing data volumes.

► **Perform full or targeted collection, on or off the network.** Collect data using complex filtering techniques based on content, data, owner, custodian and data type with Boolean logic. Forensically image entire systems when required for criminal or internal security investigations, even over tenuous network links.

► **Reduce custodian and legal hold complexity.** Streamline the management of case custodians and all necessary legal hold notifications with out-of-the-box integrations with the leading HR database solutions such as SAP® and PeopleSoft™ by Oracle®. The integrated legal hold wizard supports dynamic and static custodian entry, automated escalation, reminders and custodian Q&A.

► **Reduce overall cost and time to key decisions using Technology-Assisted Review (TAR).** Expedite data culling, coding and categorization of large document collections, speeding up the review process using AD eDiscovery’s proprietary statistical TAR engine. The TAR engine includes precision and confidence scores as well as quality control check, and comes with the product free of charge.

Wizard Driven. Use the legal hold wizard to reduce complexity and streamline management of case custodians.

Reduce the complexity of collecting data to a manageable task.
